SUMMARY

Full-stack engineer with 9+ years building complex SaaS products (TypeScript, React, Node.js, Python), currently shipping production LLM agent workflows for an AI security operations platform. Strong in data-heavy UIs and the backend services and integrations behind them.

EXPERIENCE

2025 - Present

Full Stack Developer
Conifers

- Developing an agentic AI SOC platform that automates security alert triage and incident investigation for security operations teams.
- Built backend services and APIs in Node.js/TypeScript and Python, including integrations with third-party security tools (SIEM, EDR, ticketing).
- Delivered LLM-powered agent workflows end-to-end, from backend agent pipelines to the analyst-facing investigation, alert, and dashboard UIs that turn AI findings into actionable insights.

2024 - 2025

Full Stack Developer
Montara

- Developed and optimized a highly modular, large-scale analytics platform enabling analysts to write SQL and perform advanced data analysis.
- Built Node.js GraphQL APIs and resolvers powering the platform, and integrated a Monaco-powered SQL editor, version control workflows, and data visualization components.
- Set frontend performance and state management best practices with Apollo Client and Redux Toolkit.

2022 - 2024

Frontend Developer
Guesty

- Built scalable calendar micro-apps with React and Redux, applying virtualization to deliver a smooth experience across thousands of listings.
- Built and maintained automated tests, including unit tests and end-to-end flows with Cypress, improving test coverage and reducing regressions.

2019 - 2022

Full Stack Developer
GivingWay

- Built and maintained a donation and volunteering platform, developing responsive web applications with React, Redux, and TypeScript to connect organizations with global supporters.
- Developed RESTful APIs using Java (Struts 2) to enable secure and efficient client–server communication.

2017 - 2019

Full Stack Developer
Snapgroup

- Developed and maintained travel management applications, working with React, Vue, Laravel, and MariaDB to deliver scalable solutions for group travel coordination.
- Implemented responsive UIs and backend integrations that improved user experience and streamlined travel planning workflows.

EDUCATION

2013 - 2018

Bachelor's degree in software engineering
Azrieli College of Engineering Jerusalem
